Code is throwing error:

```
1 Bullish = close > open
2 Bearish = close < open
3 c1      = (Summation[2](Bearish[1]) = 2)
4 c2      = (close > highest[2](close[1]))
5 Cond    = c1 AND c2
6 RETURN COND
```

Error on indicator programming code ✕

❌ **Syntax error:**
This variable is not used in the code:bullish

Close
"Enter/Spacebar" key
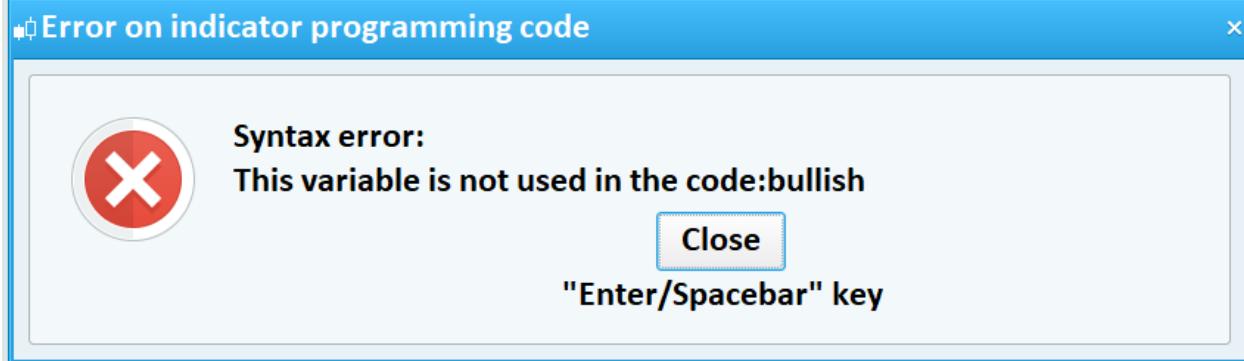

When modified by remarking the "Bullish" line, it is not working as desired:
