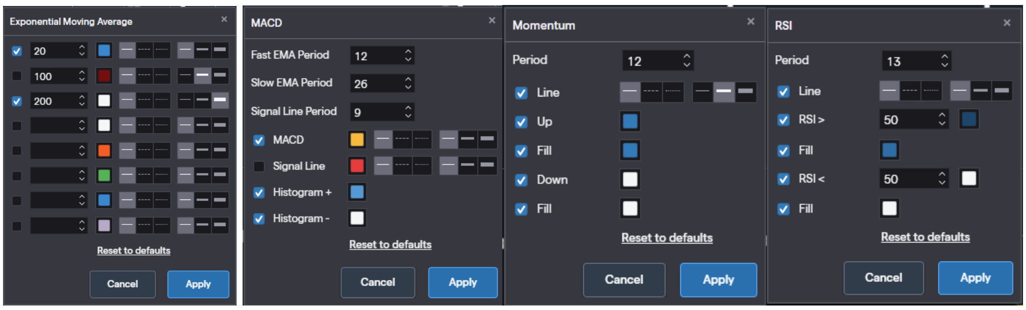
The best scalping system

Setting up the 5 min chart to trade Germany 40 (the Dax)

Above are 21 winning trades all verified.
Compounding the buy and sell trades would have gained the most return!
If the first trade fails then its a small loss.



There are 4 indicators pictured above with settings and colour options. With the moving averages the 100 is optional it won’t make any diffrence if you use it or not the rest are fine and are used to filter the trades.

All set up on I.G Market charts on dark mode. I didnt like the red and green candles so I changed them to blue candles for up and white for down i changed the colours on the indicators to match to keep things simple as possible.

The chart above was yesterday (friday 07/11/2025)

Conditions for sell trade:

Price below 200 EMA
Price below 20 EMA
Mac'D histogram white
Mac'D yellow line below the zero line
Momentum indicator white
RSI indicator white

All conditions are met so we can be safe in the knowlege we are on the right side of the market!

Next step we wait for a blue candle to close and enter the first sell trade and set our stop loss on the previous swing high

When you go into profit you can enter on the next close of a blue candle as you add to your position, just keep doing that until 1; your happy with your return or 2; the market gives you an opposing signal on the indicators.

For a buy trade it will be reverse of the sell conditions.

Example without indicators
